

LAB | Data Manipulation_JSON Handling

Step-by-Step Instructions

Step 1: Setting Up the Project

Objective: Create your project structure and download the dataset.

What to do:

1. Create a new Python file named `titanic_analysis.ipynb` or `titanic_analysis.py`
2. Create a folder named `data` in the same directory as your script
3. Download the Titanic dataset from Kaggle

Dataset Download: The Titanic dataset is available on Kaggle. You can download it from:

- **Direct Link:** [Titanic Dataset on Kaggle](#)
- **Alternative:** If you don't have Kaggle access, you can use this direct download link: [Titanic train.csv](#)

The screenshot shows a web browser with multiple tabs open, including 'Ironhack - Campus Tools', 'Ironhack Student Portal', 'Titanic - Machine Learning from Disaster', and 'Data Manipulation_JSON Handling'. The active tab is the Kaggle page for the 'Titanic - Machine Learning from Disaster' competition. The page features a search bar, navigation links like 'Sign In' and 'Register', and a 'Join Competition' button. The main content area is titled 'Titanic - Machine Learning from Disaster' and includes a description: 'Start here! Predict survival on the Titanic and get familiar with ML basics'. Below this, there are tabs for 'Overview', 'Data', 'Code', 'Models', 'Discussion', 'Leaderboard', and 'Rules'. The 'Data' tab is selected, showing a 'Dataset Description' section. This section includes an 'Overview' stating that the data is split into two groups: a training set (train.csv) and a test set (test.csv). It also mentions that the training set includes the outcome variable. On the right side of the 'Data' tab, there is a summary of the dataset: 3 files, 93.08 kB in size, and CSV type. The license is listed as 'Subject to Competition Rules'. A small image of the Titanic ship is also visible on the right side of the page.

Click on sign in -> you can sign in using your gmail account

1.

Download ->train.csv file->Save it in your data folder as titanic.csv

Titanic - Machine Learning from Disaster

Overview Data Code Models Discussion Leaderboard Rules

Some children traveled only with a nanny, therefore parent=0 for them.

gender_submission.csv (3.26 kB)

Detail Compact Column 2 of 2 columns

About this file

An example of what a submission file should look like.

These predictions assume only female passengers survive.

PassengerId	Survived
892	0
1309	1
892	0
893	1

Data Explorer

93.08 kB

- gender_submission.csv
- test.csv
- train.csv

Summary

- 3 files
- 25 columns

Download All

Open the folder and data file in VScode and it should appear like the screenshot below.
